

SYED SARIB SULTAN

Product Designer, Growth & Conversion

Islamabad, Pakistan | +92 333 5788859 | syed.sarib@imagine.art | [LinkedIn](#)

SUMMARY

Product designer who works on the parts of a product where users decide whether to pay. At ImagineArt and Chatly I design paywalls, upgrade flows, pricing pages, referral systems and onboarding. I usually start by pulling the numbers in Mixpanel to find where the funnel breaks, then design the fix and hand off a spec the engineers can build from. I also write the copy on these screens and set up A/B tests so we can tell what actually worked.

SKILLS & TOOLS

Design: Product and UX design, interaction design, design systems, prototyping, responsive layouts across breakpoints

Growth: Paywall and upgrade flows, pricing and credit packs, referral systems, onboarding, conversion copywriting, A/B testing

Data: Mixpanel funnels and retention analysis, GrowthBook, defining the metric a design is meant to move

Tools: Figma, HTML prototypes, AI image and video models (Kling, Seedance, Veo, Nano Banana, fal API), Notion

EXPERIENCE

Associate Product Designer, ImagineArt / Chatly / Vyro

Dec 2025 to Present

AI image, video and chat products (Vyro). Remote, San Francisco / Gilbert, AZ.

- Designed Chatly's full upgrade and paywall system, covering the soft-limit warnings, session and quota modals, block screens, pricing page and upgrade modal. Built a clickable prototype that lets the team switch tiers and trigger each surface, with a rule so only the highest-priority one ever shows at once.
- Built the Chatly referral system end to end and wrote the logic spec the backend worked from: 50% off for a referred user's first 7 days, 7,000 credits to the referrer per paid upgrade, capped at 12 upgrades, plus the reusable invite link and the pending and expired states.
- Dug into a funnel of 1.13M signups in Mixpanel and found the student segment was activating at a normal rate (59% vs 55%) but converting at less than half the rate of everyone else (0.43% vs 1.04%). Used that to argue for a discount plus referral loop instead of a discount on its own, and set the bar it had to clear.
- Handled the post-purchase onboarding across every breakpoint, including the splash animation and seven onboarding videos I scoped with the motion team, plus a post-signup checklist meant to bring people back.
- Rewrote the paywall copy on ImagineArt's video product. The old version led with features and apologised for the price; I led with what the user gets, explained my reasoning, and shipped three variants for the team to test.
- Owned the pricing, credit-pack, cancellation and win-back screens, including a credit slider that shows what your spend buys per model, and built Chatly's first proper mobile web experience along with a cleaner sign-in flow.
- Kept Chatly and ImagineArt visually in step by working off a shared design system.

Founder, sxtudios

Mar 2025 to Present

Independent design studio, Islamabad.

- Run a small studio doing product design and brand work for clients.

Lead UI/UX Engineer, NorenzTech

Jan 2025 to Jun 2025

Rawalpindi, Pakistan.

- Owned the interface design and the front-end build for the company's products.

UX Designer, easytect UG

Jan 2024 to Oct 2024

- Designed product interfaces for a German software team (Westerburg), focused on making the core flows easier to use.

Graphic Designer, ACM (Association for Computing Machinery)

Sep 2022 to Jan 2024

- Made the visual and brand material for the chapter's campaigns and events.

Marketing & creative roles, Parhlai, Career Konnect, Shadiyana

2025

- Held marketing and creative-lead roles at a few early-stage teams.

EDUCATION

BS Computer Science, National University of Sciences and Technology (NUST)

2022 to 2026
